

### 3017 Measurement of Height

Height shall be measured from existing grade at all points on the site to a warped plane an equal height above all points on the site (See Diagram 3017), with the following exception:

- A. Where a finished grade elevation, different than the existing grade elevation, is approved as part of a discretionary application such as a Tentative Map, Development Plan, Use Permit, Variance, or Coastal Permit, height shall be measured from the approved finished grade elevation at all points on the site to a warped plan an equal height above all points on the site. In approving a finished grade elevation that is different than the existing grade elevation, compatibility with the existing elevation of adjacent and surrounding properties shall be considered.
