

WATER UTILITIES

Fix-A-Leak Workshop

**April 18, 9 a.m. - 12 a.m, 300 N Coast Highway
(Oceanside Civic Center Community Rooms)**

Being handy around the house doesn't have to be difficult. Some common leaks found in the home are worn toilet flappers, dripping faucets, and leaking valves. Not only can the fixtures be time-consuming to find and fix, it can also get quite expensive when you add up the cost of parts, labor and wasted water.

Join us for a FREE, interactive, and informative workshop with Greg Chick, an experienced, licensed plumber from Green Plumbers USA, who will discuss everything from how to identify leaks to how to fix them. Featured topics include DIY leak detection, water awareness, and green plumbing alternatives. Questions are encouraged and pictures are even better. As a bonus we'll have demonstrations including 'How to locate and read your water meter'! Attendance is FREE but seating is limited. Email us at valueeverydrop@ci.oceanside.ca.us to reserve your space today!

*Average U.S. family per year
