

Get Smart about Your Water Use... Introducing the WaterSmart Program

The City of Oceanside welcomes all Water Utilities customers to WaterSmart, an online tool to help you manage your water use and your bill. This free service gives users access to an individualized profile to view water consumption data and get a better understanding of personal water use patterns.

WaterSmart includes many helpful features, such as leak alerts and use notifications, where you can choose to be alerted if abnormally high water use is identified, providing early warning of potential leaks or over-irrigation. WaterSmart is also an educational tool for customers to explore ways to be water efficient, learn about

other water efficiency programs offered by the City, and get to know how your use compares year to year. With the WaterSmart messaging portal, you can also send in questions or comments and communicate directly with City staff about your water use.

Registering for WaterSmart is fast, easy and free! Water customers can visit oceanside.watersmart.com and enter the account number and zip code listed on their water bill. After registering, you can access your personal profile at any time from any web-enabled device.

WaterSmart is available in two languages: English and Spanish, which you can select from a dropdown menu on the main page upon logging in.

For questions about registration or the program's features, please email GreenOceanside@oceansideca.org or call (760) 435-5816.
