

## NOTICE OF PUBLIC HEARING

### Pure Water Oceanside Groundwater Recharge and Replenishment Project

**Location:** Online  
**Zoom Meeting:** <https://zoom.us/j/92919778221>  
**Meeting ID:** 929 1977 8221

**Date | Time:** September 22, 2020 at 5:30 p.m.

---

The public is invited to attend a public hearing on the Pure Water Oceanside project. The hearing is being held in accordance with Title 22, Division 4, Chapter 3, §60320.202 of the California Code of Regulations (Title 22).

**Project:** Pure Water Oceanside is a new groundwater recharge and replenishment project using highly purified recycled water proposed by the City of Oceanside (City). Pure Water Oceanside will be using a state-of-the-art water purification process that replicates and accelerates nature's natural recycling process. It begins with recycled water that is purified through three additional steps using advanced technology. The recycled water is sourced from San Luis Rey Water Reclamation Facility (SLRWRF) wastewater flows and will be further treated at a newly constructed advanced water purification facility, which uses membrane filtration, reverse osmosis and advanced oxidation. The highly purified water will then be injected into the Mission Groundwater Basin for extraction and further treatment at the Mission Basin Groundwater Purification Facility (MBGPF). The MBGPF has been providing drinking water to the City of Oceanside since 1992. The treatment process consists of reverse osmosis and granular activated carbon for salt and chemical removal to ensure all drinking water meets or exceeds all state and federal health and safety standards. The project consists of modifications to the SLRWRF, construction of a new advanced water purification facility located at the SLRWRF, conveyance piping to the injection wells, injection and monitoring wells, and injection backwash conveyance to existing sewer collection system. The project will produce advanced purified water meeting Title 22 requirements for injection into the groundwater basin to be used as a source of potable drinking water supply. Approximately 3,400-acre feet per year (3.0 million gallons per day) would be injected into the Mission Groundwater Basin. Groundwater will be extracted at the City's existing groundwater extraction wells and treated at the existing MBGPF. The project will assist the City in improving local groundwater supply availability and reliability and improve the water quality in the groundwater basin.

**Available Information:** A copy of the Title 22 Engineering Report is available for public review at [www.PureWaterOceanside.org](http://www.PureWaterOceanside.org)

Any questions regarding this project may be directed to [PureWaterOceanside@oceansideca.org](mailto:PureWaterOceanside@oceansideca.org) or (760) 435-4500.

**Public Hearing:** The State Water Resources Control Board, Division of Drinking Water and the City will conduct the public hearing as part of the Title 22 approval process. The public hearing will begin with a brief presentation about the project, followed by opportunity for public comment and questions.
